STR2

Bending Moments in a Beam

Shows and proves the basic theory of bending moments in a beam

Screenshot of the optional TecEquipment Structures Software

- High-quality structures teaching module for students of mechanical, civil and structural engineering
- Allows safe and practical experiments into bending moments in a beam
- Realistic and verifiable experiment results
- Optional TecEquipment's Structures Software package for extra 'virtual' experiments that simulate and confirm the results from your hardware and allow extended experiments
- Optional STR2000 unit with TecEquipment's Structures Software package for automatic data acquisition **and** virtual experiments
- One of many interchangeable experiment modules from TecEquipment's modern, flexible and cost-effective Structures teaching system
- Ideal for classroom demonstrations, or students working in pairs or small groups

- TecEquipment Ltd, Bonsall Street, Long Eaton, Nottingham NG10 2AN, UK

STR2

Bending Moments in a Beam

Description

The experiment hardware is a simply supported beam 'cut' by a pivot. The beam fixes to the Structures Test Frame (STR1, available separately). Students apply loads at set positions using hangers holding various masses. To stop the beam collapsing, a moment arm bridges the cut onto a load cell thus reacting (and measuring) the bending moment force. A Digital Force Display (STR1a, available separately) displays forces during experiments.

The lecturer guide provides details of the equipment including sample experiment results. The student guide describes how to use the equipment and gives experiment procedures.

For extra 'virtual' experiments, TecEquipment can supply the optional TecEquipment Structures Software (STRS), for use on a suitable computer. The virtual experiments simulate the tests you can perform with the hardware. They also extend the choice of tests beyond that available using only the hardware, for example: higher loads, uniform loads or different test specimens. This extends the student's learning experience.

For automatic data acquisition of your experiment results, TecEquipment can supply the optional Automatic Data Acquisition Unit (STR2000). Supplied as standard with the STR2000 is TecEquipment's Structures Software which displays and logs your experiment results and gives the extra virtual experiments.

Standard Features

- Supplied with lecturer guide and student guide
- Five-year warranty
- Made in accordance with the latest European Union directives

Experiments

- Bending moment variation at the point of loading
- Variation of bending moment away from the point of loading
- Examination of various other loading cases, including loads traversing the beam

Essential Base Unit

- Structures Test Frame (STR1)

Essential Ancillaries

- Digital Force Display (STR1a)

Recommended Ancillary

- Automatic Data Acquisition Unit (STR2000) for automatic data acquisition **and** virtual experiments

Operating Conditions

Operating environment:
Laboratory

Storage temperature range:
-25°C to +55°C (when packed for transport)

Operating temperature range:
+5°C to +40°C

Operating relative humidity range:
80% at temperatures < 31°C decreasing linearly to 50% at 40°C

Specification

Nett dimensions and weight:
660 mm x 235 mm x 90 mm, 3.5 kg

Packed dimensions and weight:
Approximately 0.078 m³, 6 kg

Loads:
5 weight hangers and 150 x 10 g masses

Hanger supports:
24 loading positions along the beam, 20 mm apart

Force measurement:
Electronic load cell
