

Course

DHC-8 / 100 / 200 / 300

AIRCRAFT TYPE TRAINING

Course Description

DHC-8/100/200/300 Type Training is an interactive state-of-the-art web based training and is designed to develop skills, knowledge and performance among **maintenance** and **flight crew personnel**.

The course is designed to **AICC** and **SCORM** standards and combines rich multimedia graphics with limited use of text, audio narration and a high degree of interactive elements. Lesson Objectives and Knowledge Checks complete each individual chapter.

Training Areas

- Initial maintenance training
- Initial pilot training
- Familiarization training
- Recurrent or refresher training
- Performance training (*DHC-8-300 only*)

Application

Simulation and multimedia content can be used either as an aid to instructors for classroom training or for standalone training via the Inter- or Intranet. The backbone of the Course is the **Learning Management System (LMS)** which allows you to organize, track and document your training activities. Study progress, the total time spent, the attempts per lesson, the stage test results and the general progress of each trainee are constantly monitored and documented by the Learning Management System to the satisfaction of the authority.

Your Quality- and Recordkeeping System.

Course Duration

50 hours for initial maintenance training

40 hours for initial pilot training

15 hours for familiarization training

The recurrent training depends on the subjects selected.
