

Course

Flight Safety Concepts

incl. Threat and Error Management

Course Description

Threat management means the process of detecting and responding to the threats with countermeasures which reduce or eliminate the consequences of threats and mitigate the probability of errors or undesired aircraft states.

Threat and Error Management as well as Flight Safety is a **core competence of flight instructors** and shall be part of each training as well assessment.

This course will **raise awareness** on Flight Safety in general as well as Threat and Error Management in special. By **increasing your understanding** of these subjects, you will **improve your ability** to respond accurately to possible threats, mitigate errors and therefore increase the overall safety of your operation.

The backbone of this course is the **Learning Management System (LMS)** which allows the organization, tracking and documentation of the training activities. Self assessment questions are directly linked to the multimedia-based training allowing the student to check his knowledge.
